What is the AnyConnect App?

*Tufts AnyConnect* for mobile devices is a small app, downloaded from the App Store or Google Play, that provides valid Tufts users with a secure remote link to the Tufts network allowing mobile devices access to web pages that have Tufts-only access restrictions. While connected, all of your data traffic will go over the VPN which creates adherence to all Tufts Acceptable Use Policies.
AnyConnect App for an Android Phone or Tablet
How Do I Install the AnyConnect App for an Android Phone or Tablet?

Search for the AnyConnect App

1. From the Play Store on your Android device click the Search icon.

2. Enter anyconnect in the search field.

3. Select AnyConnect ICS+ created for your device.
Install the App

Tap the **Install** button to install the AnyConnect app.
Accept Access

Click **Accept** at the window indicating that **AnyConnect ICS+ needs access to**. The device will display a list of information the app will access.
Locate the AnyConnect Icon

Once downloaded, the AnyConnect icon will be available on your device.
How Do I Configure the AnyConnect App for an Android Phone or Tablet?

Open the AnyConnect App

From your desktop, tap the **AnyConnect icon** to open the app.
Add VPN Connection

From the home page, tap Add New VPN Connection... to create a shortcut to the Tufts VPN. Once created the link is available in the Choose a connection section for future use.
Create VPN Connection

In the **Connection Editor** you will type a Description for your connection and the Tufts VPN server address.
Create Description

1. In the Connection Editor, tap the drop down next to Description.

2. Enter **Tufts VPN** as your description.

3. Tap **OK**.
Enter Server Address

1. In the Connection Editor, tap the drop down next to Server Address.

2. Enter http://vpn.tufts.edu as the server address.

3. Tap OK.
Complete Configuration

Tap **Done** at the bottom of the Connection Editor to complete the configuration.

You now have a shortcut to the Tufts VPN saved and available to you for future use. See How Do I Connect the AnyConnect App for the Android Phone or Tablet? for instructions on how to connect to Tufts VPN.

Remember to disconnect at the end of every session to ensure that you do not have a secure link open for another user to access (see How Do I Disconnect the AnyConnect App for an Android Phone or Tablet?).
How Do I Connect the AnyConnect App for an Android Phone or Tablet?

Open the AnyConnect App

From your desktop, tap the AnyConnect icon to open the app.
Select Connection

1. Select the **Tufts VPN** connection.

2. To begin connection, slide the **AnyConnect VPN slider** from **OFF** to **ON**.
Enter your Tufts Credentials

1. **Username** - Enter your **Tufts Username**.

2. **Password** - Enter your **Tufts Password**.

3. Tap **Connect** to complete the connection.
Confirm Connection

You now have a secure link to the Tufts network available to you as indicated by the VPN icon that looks like a key in the toolbar. Note that while connected, all of your data traffic will go over the VPN which creates adherence to all Tufts Acceptable Use Policies.

Remember to disconnect at the end of your session.
How Do I Disconnect the AnyConnect App for an Android Phone or Tablet?

Open the AnyConnect App

From your desktop, tap the AnyConnect icon to open the app.
Disconnect Session

In the AnyConnect VPN section slide the ON switch to OFF to disconnect.
Confirm Disconnection

Once disconnected, your status should now be Disconnected and the VPN icon that looks like a **key** is no longer in the toolbar.
How Do I Request Help?

Contact the TTS Service Desk at (617) 627-3376 or send an email to it@tufts.edu.
